

# AW TRAILERS WEELY SAFE

The AW Weelysafe was borne out of one of our local farmers' personal and very painful experiences, which happened while he was removing and swapping from standard rear tractor wheels to row crop wheels.

He had removed the rear wheel and was 'wheeling' it across the yard when he lost his footing and slipped, fell face forward onto the ground and the wheel fell on top of his back, luckily the centre of the wheel ended up above his head (if you could call it luck!!) so there were no head injuries – but the impact of the sheer weight from the wheel crushed his shoulder!! He needed hospital treatment and surgery to repair the damage and had to go through 6 months of pain and incapacitation – something every busy farmer could do without!

At this point and a considerable amount of 'Wifey' advice, he teamed up with his local blacksmith to try and develop something to prevent this happening to someone else.

After producing a prototype we were approached at AW Trailers as to whether we would be interested in joining forces to produce and manufacture this unit and there you have it - the 'WEELYSAFE' was born!!

It is **Clean**, **Simple** and **Safe** to use, enabling the operator to remove, carry, store & refit most large tractor / combine wheels & tyres up to 2m in diameter either in a yard or even field situations. It will fit most tractor loader machines and telehandlers. With ever increasing wheel sizes and lone working situations, it is a must for every farm.
