

HYDRAULIC WING BALE

The Hydraulic Wing System can be fitted to any new AW Bale/ Pallet Trailer.

We have designed the wing to be lower than the bed of the trailer providing the user with a more versatile trailer. In addition trying to provide the user with a more useable trailer, both sides will operate independently of each other.

The Wings are manufactured from Heavy Duty CHS to protect the load from damage, also the tube will provide better torsional rigidity than RHS. There are options to suit different bale heights including telescopic sides and the wings can be set wide to accommodate potato boxes.

Optional Hydraulic top clamp
